

Simple Electric Vehicle Routine Battery Maintenance

- Wash Vehicle Once A Week and Entire Battery Compartment Normal Water Pleasure from A Hose. If At All Possible Dry Battery Compartment With An Air Hose. Otherwise let air dry.
- Check Battery Cables
- Check Tire Pressure “22 lbs to 25 lbs”
- Fill Batteries With Distilled Water As Needed To The Proper Fill Line As Pictured Below.
- Charge Vehicle Daily After Every Use

*Note: Overfilling Your Batteries Will Shorten The Life. Contaminants such dirt, debris and leftover electrolytes from previous overfilling can provide a path for small current draw that can slowly discharge battery pack. Thus wasting valuable energy. To prevent battery self-discharge, batteries should always kept clean.
